

Thanks for the second chance for comments!!!

As previously stated," If Amateur Radio needs to be eliminated and no longer available for use of the many thousands of us amateur operators, there couldn't be a better method!" Some of our European neighbors have tried and ruled against this very method, due to the horrendous, unbearable noise and interference spread throughout the radio spectrum. Particularly, in today's unsettled world, with all the potential Terrorists activity pending world wide; breaking up an established means of reliable and proven emergency communications, to appease (Our Government Cancer) lobbyists, has our founders being not too proud of us right now! Are there any among you with courage to fight this great mistake and avert this possible tragedy? Bob Dawson n9bob
